Change Description:

The chip of the CPLD and fiber optic transceiver of the ICF-1150 Series has been phased out due to the vendor's roadmap planning. It will be replaced with another chip, performing the same functions for the ICF-1150 Series.

The ICF-1150 add S3 DIP Switch and the DIP switch is located inside the ICF-1150. When the ICF-1150 is in RS-485 mode, use this DIP switch to configure RS-485 data direction control, data format, and baudrate.
